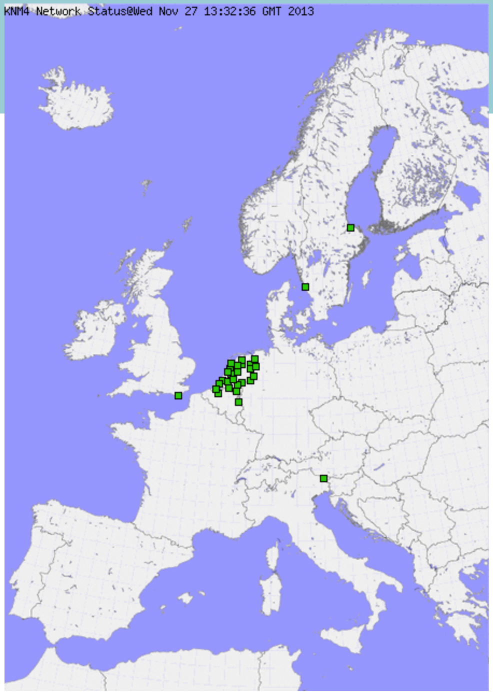
Processing and usage of GNSS

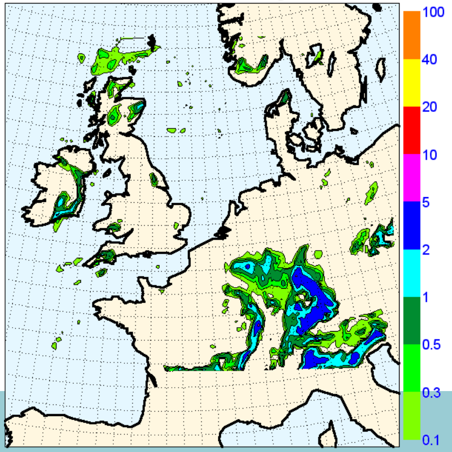
Siebren de Haan

Real Time

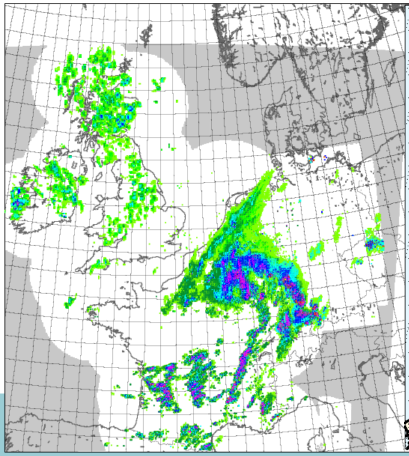


Hourly

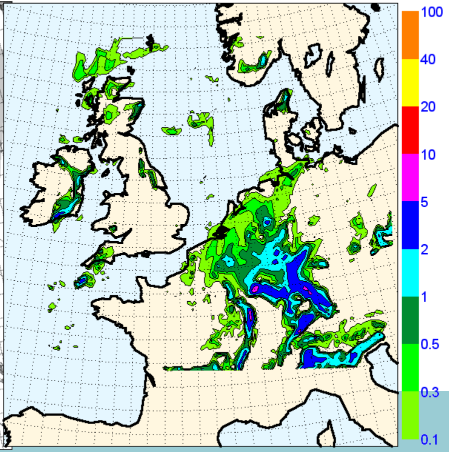
- Processing within 10 min.
- Dutch regional network + NTRIP stations
- Assimilated in hourly run of HIRLAM
- Positive impact on rainfall



U11 t+1 precipitation forecast valid:
16 to 17 UTC on 11 May 2010

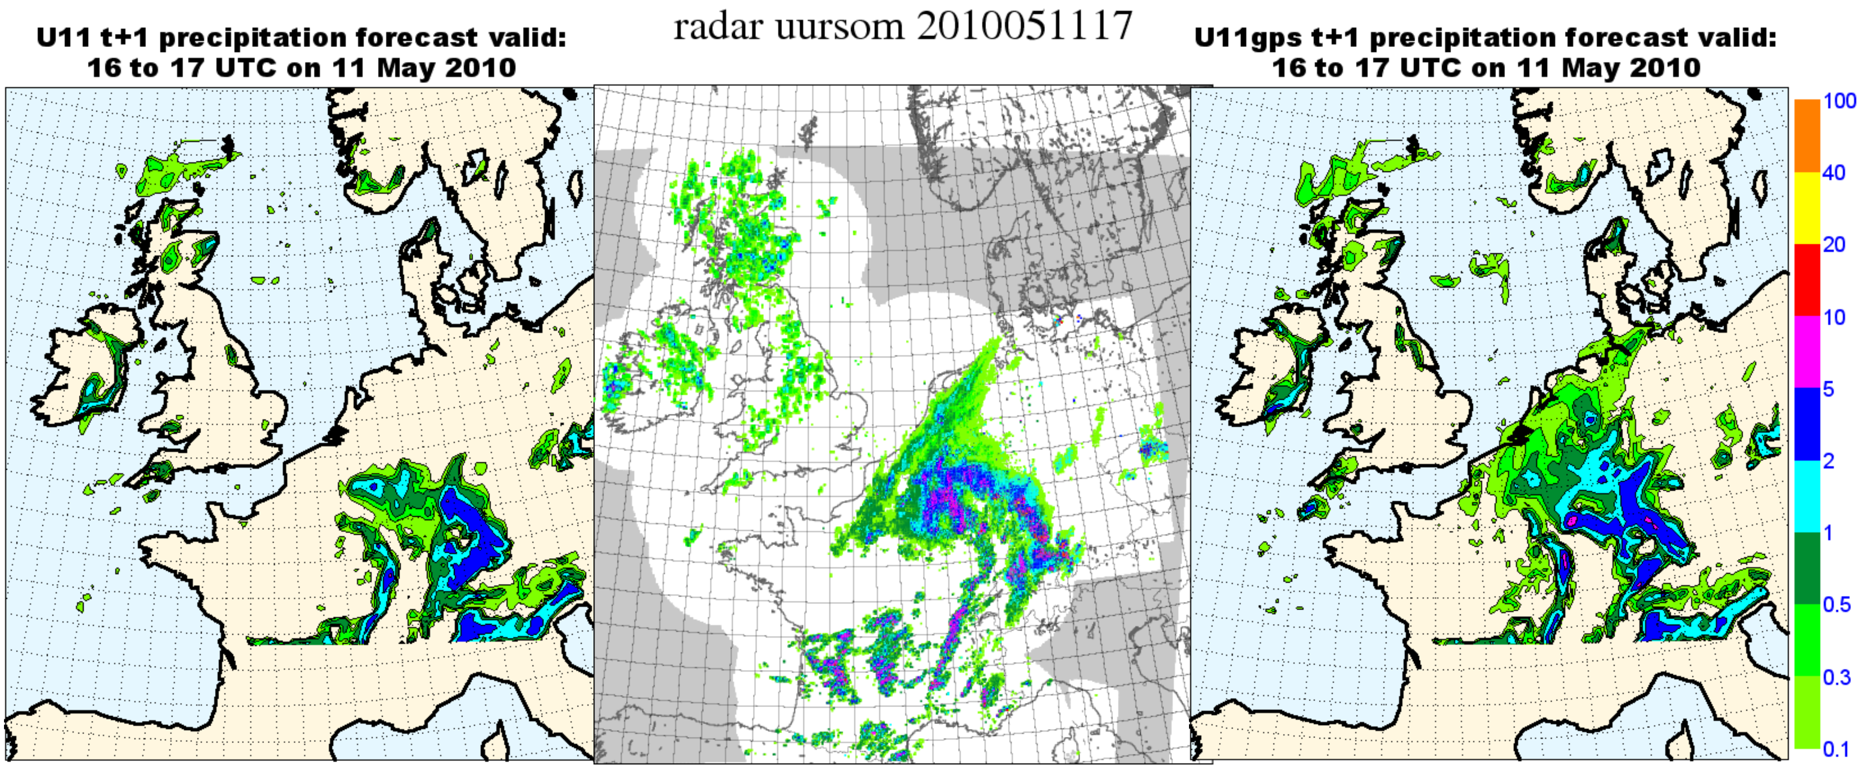


radar uursom 2010051117



U11gps t+1 precipitation forecast valid:
16 to 17 UTC on 11 May 2010

Impact of GNSS data on rainfall



U11 t+1 precipitation forecast valid: 16 to 17 UTC on 11 May 2010

radar uursom 2010051117

U11gps t+1 precipitation forecast valid: 16 to 17 UTC on 11 May 2010

Next in 2014

Assimilation in Harmonie

Every 3 hours:

- VARBC
- All centres
  - Cut-off time 1h10m

Hourly….?

- Slant delay?
  - processing
    - *PPP?*

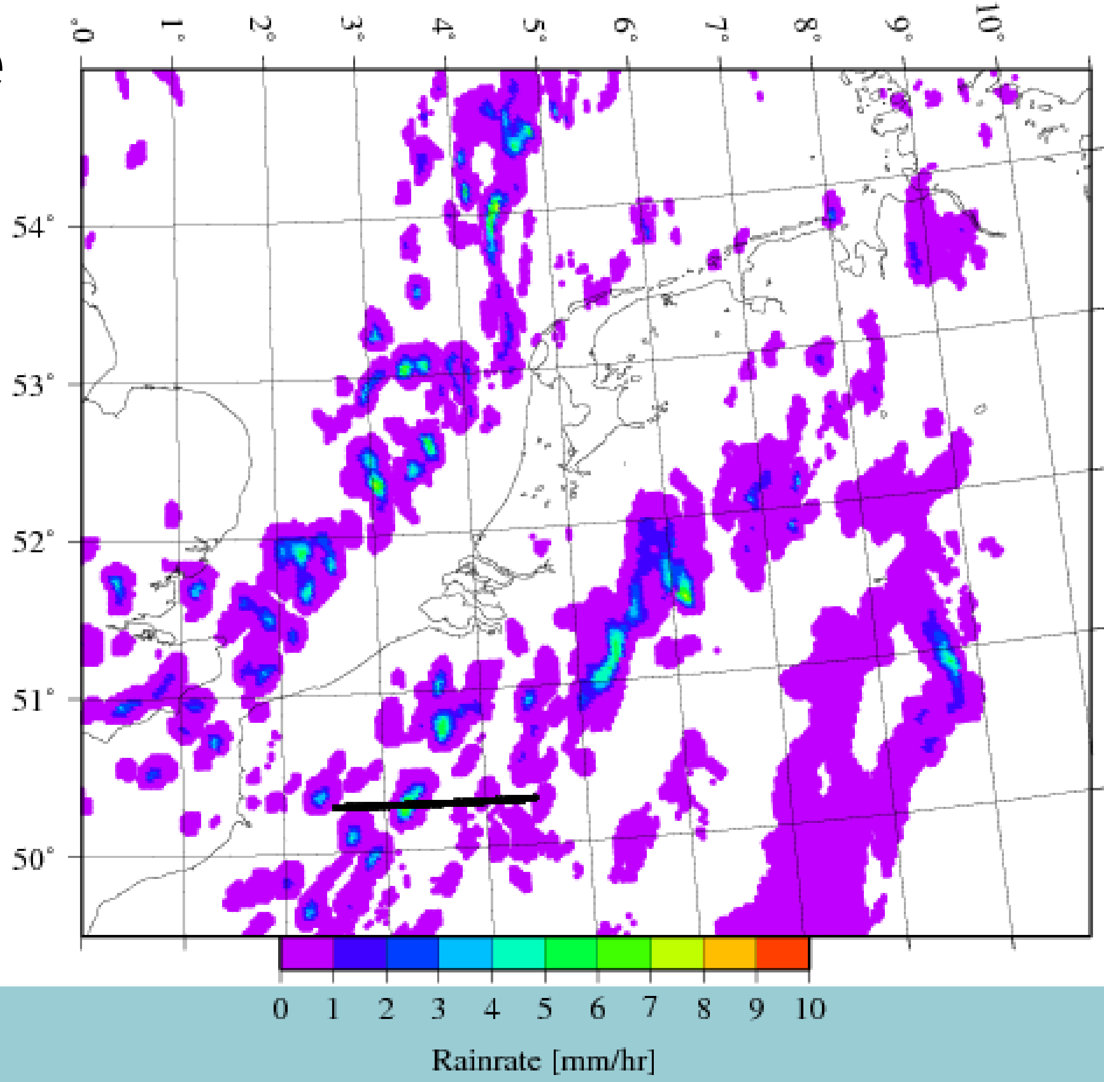
Slants and nowcasting

A good case says more than ……

Harmonie run

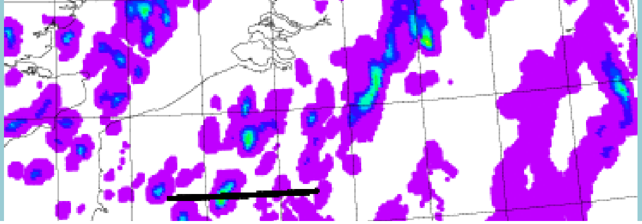
- 2.5 km
- Non-hydrostatic
- 12 hour forecast

Severe very local convective rainfall



Rainrate 2012/09/25 12UTC

ΔSlant Wet Delay information (v0)

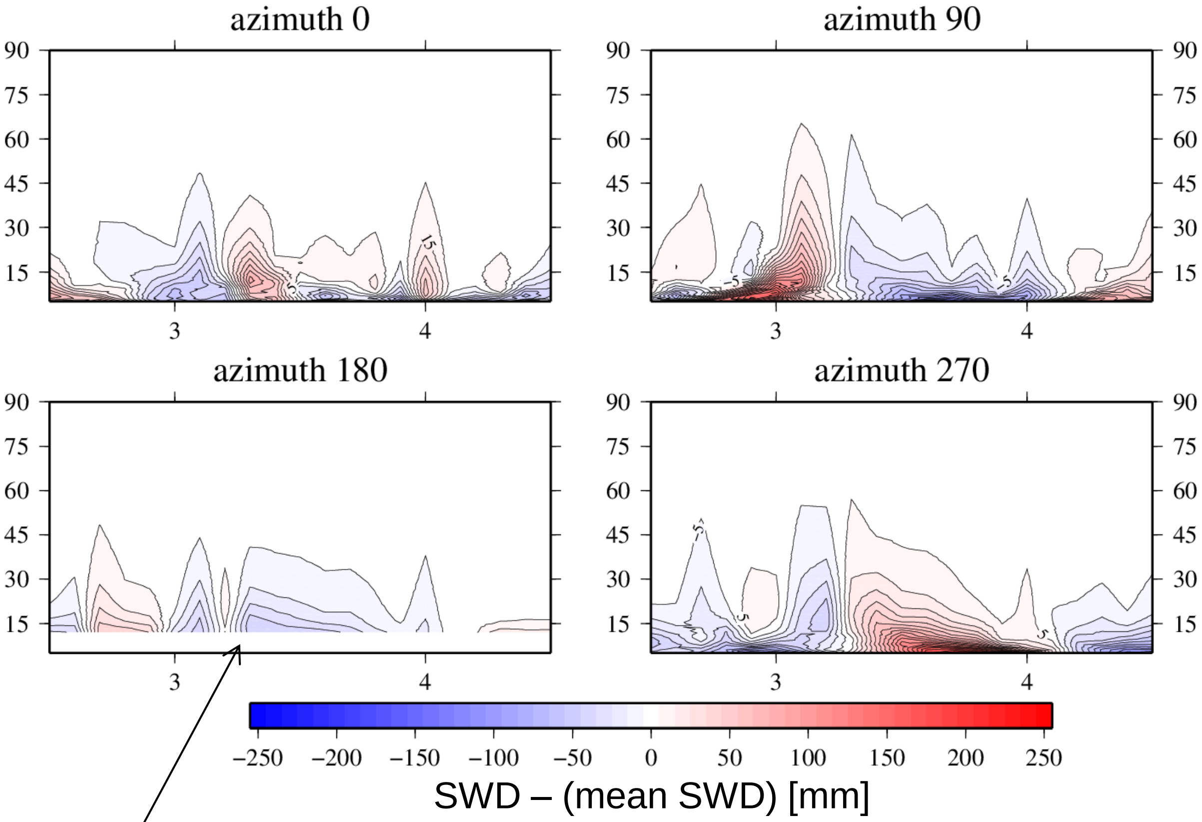


Algorithm developed for HIRLAM 11km (hydrostatic)!!

Mean SWD ≈ ZTD/mapping

There is a signal!

Very high density network needed



southern model boundary

Mean of SWD over all azimuth at given elevation
